

10.4 and 10.9 Practice Review

Geometry Honors

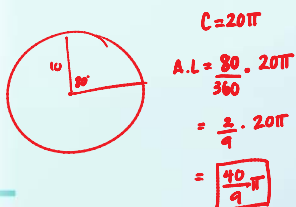

C I R C L e s

1.

Given a circle of radius 10, find the arc length of a 80° arc

1.

Given a circle of radius 10, find the arc length of a 80° arc

2.

Find the area of a circle if an arc on the circle has measure 30° and length 9π

2.

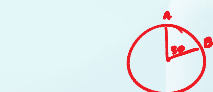

Find the area of a circle if an arc on the circle has measure 30° and length 9π

$$9\pi = \frac{30}{360} \cdot C$$

$$9\pi = \frac{1}{12} \cdot C$$

$$C = 108\pi$$

$$r = 54$$

$$A = \pi r^2$$

$$A = \pi (54)^2$$

$$A = 2916\pi$$

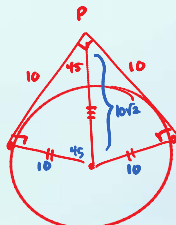

3.

Two tangent segments both have length 10 and form a 90° angle where they meet at P. How far is P from the circle?

3.

Two tangent segments both have length 10 and form a 90 degree angle where they meet at P. How far is P from the circle?

$$10\sqrt{2} - 10$$

4.

The centers of two circles are 15 units apart. The circles have radii measuring 5 and 8. Find the length of the common external tangent.

4.

The centers of two circles are 15 units apart. The circles have radii measuring 5 and 8. Find the length of the common external tangent.

$$3^2 + x^2 = 15^2$$

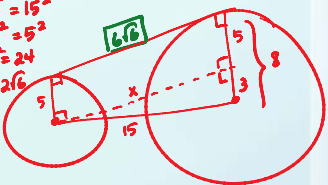

$$1^2 + x^2 = 5^2$$

$$x^2 = 24$$

$$x = 2\sqrt{6}$$

$$x = 3$$

$$x = 3$$

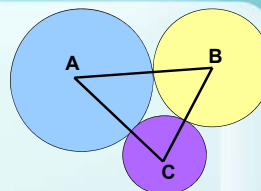

5. Find the radius of each circle.

$$AB = 16$$

$$BC = 10$$

$$AC = 12$$

5. Find the radius of each circle.

$$AB = 16$$

$$BC = 10$$

$$AC = 12$$

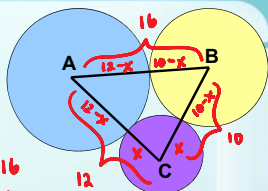

$$12 - x + 10 - x = 16$$

$$22 - 2x = 16$$

$$-2x = -6$$

$$x = 3$$

$$\text{Radii} = 3, 7, 9$$

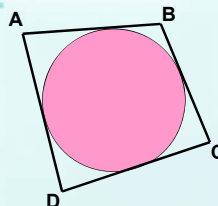

6. Find AD.

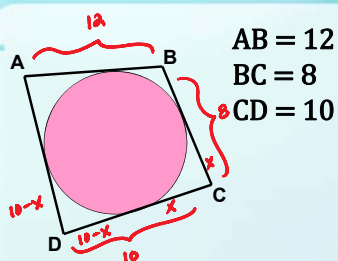

$$AB = 12$$

$$BC = 8$$

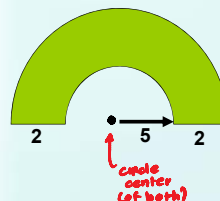

$$CD = 10$$

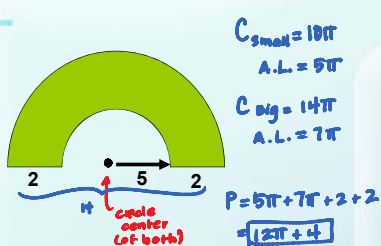

6. Find AD.

7. Find the Perimeter.

7. Find the Perimeter.

8.

How many revolutions does a wheel make if it has a radius of 15 inches and it travels 100 feet? Round to the 10th of a revolution.

9.

How many revolutions does a wheel make if it has a radius of 15 inches and it travels 100 feet? Round to the 10th of a revolution.

$$C = 30\pi \text{ in} \quad 100 \text{ ft} = 1200 \text{ in}$$

$$\frac{1200}{30\pi} \approx 12.7 \text{ revolutions!}$$

9.

If an arc of a circle has a length of 4π inches and measures 45 degrees, what is the radius of the circle?

9.

If an arc of a circle has a length of 4π inches and measures 45 degrees, what is the radius of the circle?

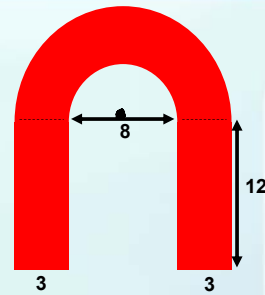

$$\frac{45}{360} = \frac{4\pi}{C}$$

$$\frac{1}{8} = \frac{4\pi}{C}$$

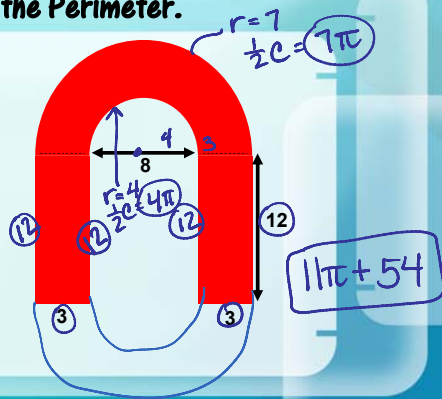

$$C = 32\pi$$

$$r = 16$$

10. Find the Perimeter.

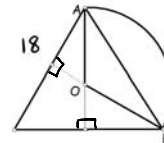

10. Find the Perimeter.

11.

$\triangle ABC$ is equil.
Find the length of arc AB.

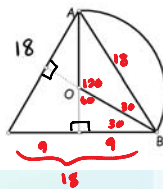

11.

$\triangle ABC$ is equil.
Find the length of arc AB.

$$\frac{x}{18} = \frac{9\sqrt{3}}{18\sqrt{3}}$$

$$x = 9\sqrt{3}$$

Radius: $6\sqrt{3}$
Circumf: $12\sqrt{3}$

$$A.L. = \frac{1}{3} \cdot 12\sqrt{3} = 4\sqrt{3}$$
