

Postulates

(1)

$$AB = 6$$

$$r = 8$$

Given $\odot C$ & AB Tangent

Find CB & DB

10 2

Theorem: If two tangents ^{segments} are drawn from the same point then they are \cong .

Given: \overline{AB} and \overline{BC} are Tangents

$\odot D$

Prove: $\overline{AB} \cong \overline{BC}$

$$\begin{array}{r} 1.12 \\ 2.6 \\ 3.4 \end{array} \quad \begin{array}{l} 2 \\ \downarrow \end{array}$$

$$12x^2 - 16x - 3 = 0$$

$$(6x + 1)(2x - 3) = 0$$

~~$x = -1/6$~~ $x = 3/2$

? = 23 - x + x
~~23~~

Common Tangent Problems

External

- ① Rt. Δ
- ② Rectangle

Internal
