| <p>Sector of a circle:</p>  | $\frac{\text{Arc Measure}}{360} \cdot \pi r^2$ $\frac{\text{Arc length}}{C_0} \cdot A_0$ | <p>Segment of a circle:</p>  |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|

1. Find the area of the shaded region.

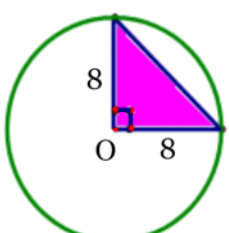

Sector

$$\frac{90}{360} \cdot 64\pi$$

$$A_{\text{sect}} = 16\pi u^2$$

2. Find the area of the triangle.

$$A_{\Delta} = \frac{1}{2}(8)(8)$$

$$= 32 u^2$$

3. Put it together: Find the area bounded by the segment

$$A_{\text{seg}} = (16\pi - 32) u^2$$

$$A_{\text{seg}} = A_{\text{sect}} - A_{\Delta}$$

4. Find the area of the segment (the area of the shaded region).

$$A_{\text{sect}} = \frac{1}{3}(36\pi)$$

$$= 12\pi u^2$$

$$A_{\Delta} = \frac{1}{2}(6\sqrt{3})(3)$$

$$= 9\sqrt{3} u^2$$

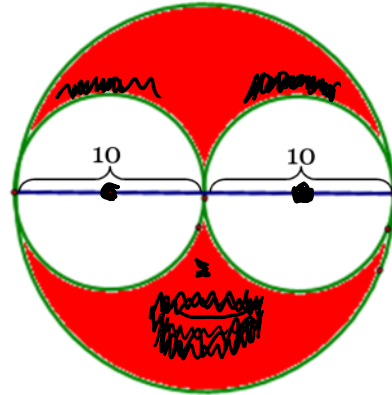

$$A_{\text{seg}} = 12\pi - 9\sqrt{3} u^2$$

$$A_{\text{seg}} = \boxed{12\pi - 9\sqrt{3}} u^2$$

5. Find the area of the shaded region.

$$50\pi \text{ u}^2$$

6. Find the area of the shaded region.

$$(100 - 25\pi) \text{ ft}^2$$

$$\frac{360}{360}$$

$$(160 - 25\pi) \text{ ft}^2$$

7. Find the area of the shaded region.

$$(1200 - 144\pi) \text{ cm}^2$$

$$24 \times 50 = 1200$$
